

STEEL PRODUCTS CATALOG

Galvanized, Mild Steel & Stainless Steel Pipes, Purlins, Plates & Structural Sections

01 Round GP Pipe

Slug: round-gp-pipe

Description

Round GP Pipes are manufactured from high-quality galvanized steel with a protective zinc coating that provides excellent resistance against rust and corrosion. They are widely used in construction, fencing, roofing, water supply, greenhouse structures, and industrial fabrication.

Benefits

- Excellent corrosion resistance
- Long service life
- Low maintenance
- High strength and durability
- Easy to fabricate and weld
- Suitable for indoor and outdoor applications

Available Thickness: 1.0 mm – 4.0 mm

02 Square GP Pipe

Slug: square-gp-pipe

Description

Square GP Pipes are galvanized steel hollow sections designed for structural strength and durability. They are ideal for gates, railings, furniture, roofing, and fabrication work.

Benefits

- Zinc-coated for corrosion protection
- Strong structural support
- Smooth surface finish
- Lightweight construction
- Easy fabrication
- Long-lasting performance

Available Thickness: 1.0 mm – 4.0 mm

03 Rectangular GP Pipe

Slug: rectangular-gp-pipe

Description

Rectangular GP Pipes provide superior load-bearing capacity and corrosion resistance, making them suitable for industrial sheds, roofing structures, and fabrication projects.

Benefits

- High structural stability
- Corrosion-resistant coating
- Easy installation
- Cost-effective
- Durable finish
- Suitable for heavy-duty applications

Available Thickness: 1.2 mm – 4.0 mm

04

Round MS Pipe

Slug: round-ms-pipe

Description

Round MS Pipes are manufactured from premium mild steel and are widely used in construction, engineering, industrial fabrication, and mechanical applications.

Benefits

- High tensile strength
- Easy welding and fabrication
- Excellent durability
- Cost-effective
- Heavy load capacity
- Available in multiple sizes

Available Thickness: 1.2 mm – 6.0 mm

05

Square MS Pipe

Slug: square-ms-pipe

Description

Square MS Pipes are widely used for structural frameworks, gates, furniture, machinery, and industrial construction due to their superior strength and versatility.

Benefits

- Excellent structural performance
- Easy machining
- High durability
- Strong load-bearing capability
- Economical solution
- Long service life

Available Thickness: 1.2 mm – 6.0 mm

06

Rectangular MS Pipe

Slug: rectangular-ms-pipe

Description

Rectangular MS Pipes are ideal for roofing, bridges, industrial buildings, fabrication, and commercial construction projects requiring excellent strength.

Benefits

- High mechanical strength
- Excellent weldability
- Smooth finish
- Easy installation
- Durable construction
- Cost-efficient

Available Thickness: 1.2 mm – 6.0 mm

07

Round SS Pipe

Slug: round-ss-pipe

Description

Round Stainless Steel Pipes are manufactured using premium SS grades such as 304 and 316, offering exceptional corrosion resistance and attractive finishes.

Benefits

- Rust resistant
- Hygienic surface
- Attractive appearance
- Heat resistant
- Long service life
- Minimal maintenance

Available Thickness: 0.8 mm – 4.0 mm

08

Square SS Pipe

Slug: square-ss-pipe

Description

Square Stainless Steel Pipes are commonly used in architectural projects, railings, food industries, pharmaceutical plants, and decorative applications.

Benefits

- Premium polished finish
- Superior corrosion resistance
- High durability
- Easy cleaning

- Strong structural support
- Modern appearance

Available Thickness: 0.8 mm – 4.0 mm

09

Rectangular SS Pipe

Slug: rectangular-ss-pipe

Description

Rectangular Stainless Steel Pipes provide excellent strength and corrosion resistance for industrial, commercial, and decorative applications.

Benefits

- Excellent weather resistance
- High strength
- Attractive finish
- Easy fabrication
- Long-lasting performance
- Low maintenance

Available Thickness: 1.0 mm – 4.0 mm

10

C Purlin

Slug: c-purlin

Description

C Purlins are cold-formed steel sections widely used as roof and wall support members in industrial buildings, warehouses, and commercial structures.

Benefits

- Lightweight design
- High load capacity
- Easy installation
- Corrosion-resistant options
- Cost-effective
- Excellent structural performance

Available Thickness: 1.6 mm – 3.0 mm

11

Z Purlin

Slug: z-purlin

Description

Z Purlins are engineered structural members designed for long-span roofing systems, offering superior strength and efficient load distribution.

Benefits

- Longer span capability
- Reduced structural weight
- Excellent durability
- Easy overlapping installation
- High strength
- Low maintenance

Available Thickness: 1.6 mm – 3.0 mm

12**Steel Plate**

Slug: steel-plate

Description

Steel Plates are flat rolled steel products suitable for construction, fabrication, heavy engineering, pressure vessels, bridges, and industrial machinery.

Benefits

- High strength
- Excellent durability
- Easy fabrication
- Wear resistant
- Reliable performance
- Wide industrial applications

Available Thickness: 2 mm – 25 mm

13**MS Channel**

Slug: ms-channel

Description

MS Channels are structural steel sections used in construction, industrial fabrication, machinery supports, warehouses, and infrastructure projects.

Benefits

- Strong structural support
- Excellent load-bearing capacity
- Easy fabrication
- Durable construction
- Cost-effective
- Versatile applications

Available Thickness: 4 mm – 12 mm

14**Steel Beam**

Slug: steel-beam

Description

Steel Beams, including I Beams and H Beams, are heavy structural members used in commercial buildings, factories, bridges, warehouses, and infrastructure projects where maximum load-bearing strength is required.

Benefits

- Exceptional structural strength
- High load-bearing capacity
- Suitable for long spans
- Excellent durability
- Earthquake-resistant performance
- Ideal for heavy construction

Available Thickness: Web: 5–20 mm | Flange: 7–35 mm
